

Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the instant application:

What is claimed is:

1. (Currently Amended) A method of arranging grammar files in a presentation list in a callflow development graphical user interface (GUI), comprising the steps of:

receiving a request to visually display in ~~a graphical user interface~~ the GUI the grammar files in the presentation list;

~~searching among a plurality of files and distinguishing between a first subset of these files that contain built-in user-defined grammars, each defining a built-in user-defined grammar file, and a second subset of these files that contain built-in user-defined grammars, each defining a built-in user-defined grammar file, wherein each user-defined grammar file is written by a user of a call-flow application and each built-in grammar file was available when the call-flow application was installed;~~

sorting the grammar files based on a first criterion that assigns the first subset of user-defined grammar files priority over ~~built-in grammar~~ the second subset of files; and

sorting the grammar files within the first subset of files and the grammar files within the second subset of files according to a second criterion; and

simultaneously displaying ~~user-defined grammar~~ the first subset of files and the ~~built-in grammar~~ second subset of files within the presentation list such that ~~each user-defined grammar file is visually distinguishable from each built-in grammar file by presenting elements of the built-in grammar files and elements of the user-defined grammar files as a sequential list of elements wherein elements of the user-defined grammar files in the first subset of files are presented ahead of elements of the built-in grammar files in the second subset of files; and~~

partitioning the first subset of files and the second subset of files by a visual aid

~~wherein when a built-in grammar file and a user-defined grammar file share the same name designation, the user-defined file is presented above the built-in grammar file.~~

2. (Original) The method of claim 1, wherein the method further comprises the step of displaying the grammar files when a user selects the grammar files.

3. (Previously Presented) The method of claim 1, wherein the step of visually displaying comprises presenting the presentation list such that each grammar file is labeled with a label indicating whether the grammar file is a user-defined grammar file or a built-in grammar file.

4. (Previously Presented) The method of claim 1, wherein the step of visually displaying comprises presenting the presentation list such that each grammar file is presented in a text format that indicates whether the grammar file is a user-defined grammar file or a built-in grammar file.

5. (Previously Presented) The method of claim 1, wherein the user-defined grammar files and the built-in grammar files can share the same name.

6. (Previously Presented) The method of claim 1, wherein the second criterion is an alphabetical order.

7. (Previously Presented) The method of claim 1, wherein the second criterion is a chronological order.

8. (Currently Amended) A system for arranging grammar files in a presentation list comprises:

a memory; and

a processor programmed to

receive a request to display the grammar files from the memory in the presentation list,

~~searching among a plurality of files and distinguishing between a first subset of these files that contain built-in user-defined grammars, each defining a built-in user-defined grammar file, and a second subset of these files that contain built-in user-defined grammars, each defining a built-in user-defined grammar file, wherein each user-defined grammar file is written by a user of a call-flow application and each built-in grammar file was available when the call-flow application was installed;~~

sorting the grammar files based on a first criterion that assigns the first subset of user-defined grammar files priority over built-in grammar the second subset of files; and

sorting the grammar files within the first subset of files and the grammar files within the second subset of files according to a second criterion; and

simultaneously display ~~displaying~~ the user-defined grammar first subset of files and the built-in grammar second subset of files in the presentation list in a graphical user interface such that ~~each user-defined grammar file is visually distinguishable from each built-in grammar file by presenting elements of the built-in grammar files and elements of the user-defined grammar files as a sequential list of elements wherein elements of the user-defined grammar files in the first subset of files are presented ahead of elements of the built-in grammar files in the second subset of files;~~ and

partitioning the first subset of files and the second subset of files by a visual aid.

9. (Original) The system of claim 8, wherein the processor is further programmed to display the grammar files when a user selects the grammar files.

10. (Previously Presented) The system of claim 8, wherein the processor is further programmed to distinguish between a user-defined grammar and a built-in grammar by displaying the presentation list such that each grammar file is labeled with a label indicating whether the grammar file is a user-defined grammar file or a built-in grammar file.

11. (Previously Presented) The system of claim 8, wherein the processor is further programmed to distinguish between a user-defined grammar and a built-in grammar by displaying the presentation list such that each grammar file is presented in a text format that indicates whether the grammar file is a user-defined grammar file or a built-in grammar file.

12. (Previously Presented) The system of claim 8, wherein the user-defined grammar files and the built-in grammar files can share the same name.

13. (Previously Presented) The system of claim 8, wherein the second criterion is an alphabetical order.

14. (Previously Presented) The system of claim 8, wherein the second criterion is a chronological order.

15. (Original) The system of claim 8, wherein the presentation list is at least one among a drop-down list and a list box.

16. (Currently Amended) A computer-readable storage, having stored thereon a computer program having a plurality of code sections executable by a computer for

causing the computer to optimally arrange grammar files in a presentation list, comprising the steps of:

receiving a request to visually display in a user interface the grammar files in the presentation list;

~~searching among a plurality of files and distinguishing between a first subset of these files that contain built-in user-defined grammars, each defining a built-in user-defined grammar file, and a second subset of these files that contain built-in user-defined grammars, each defining a built-in user-defined grammar file, wherein each user-defined grammar file is written by a user of a call-flow application and each built-in grammar file was available when the call-flow application was installed;~~

sorting the grammar files based on a first criterion that assigns the first subset of user-defined grammar files priority over built-in grammar the second subset of files; and

sorting the grammar files within the first subset of files and the grammar files within the second subset of files according to a second criterion; and

visually displaying the first subset of files and the second subset of files within the presentation list such that the user-defined grammar files in the first subset of files are presented ahead of the built-in grammar files in the second subset of files; and

partitioning the first subset of files and the second subset of files by a visual aid

~~visually displaying the presentation list such that each user-defined grammar file is simultaneously displayed and visually distinguishable from each built-in grammar file by presenting elements of the built-in grammar files and elements of the user-defined grammar files as a sequential list of elements wherein elements of the user-defined grammar files are presented ahead of elements of the built-in grammar files.~~

17. (Previously Presented) The computer-readable storage of claim 16, wherein the machine-readable storage is further programmed to sort by the second criterion being an alphabetical order.

18. (Previously Presented) The computer-readable storage of claim 16, wherein the machine-readable storage is further programmed to sort by the second criterion being a chronological order.

19. (New) The method of claim 1, wherein the visual aid for partitioning the first subset of files and the second subset of files includes at least one among a space, a dashed line, and a group header.

20. (New) The system of claim 8, wherein the visual aid for partitioning the first subset of files and the second subset of files includes at least one among a space, a dashed line, and a group header.

21. (New) The computer-readable storage of claim 16, wherein the visual aid for partitioning the first subset of files and the second subset of files includes at least one among a space, a dashed line, and a group header.
